SUMMARY

Software Developer and Computer Science student focused on **Information Technology** and **Computer Engineering**. Specialized in developing scalable web and IoT solutions using modern **programming languages** in **Agile development** environments. Technical expertise includes system architecture and data-driven optimization of engineering workflows.

EDUCATION

Ghulam Ishaq Khan Institute (GIKI)
BS in Computer Science (Specialization in Artificial Intelligence)

Swabi, Pakistan
Sep 2023 – May 2027

EXPERIENCE

Quecko

Frontend Developer (Part-time)

Islamabad, Pakistan

Aug 2025 – Present

- Spearheaded Frontend Architecture in an **Agile development** cycle, achieving a **30% improvement** in performance via code-splitting.
- Reduced technical debt by 15% by refactoring legacy logic and **coordinated a 5-person cross-functional team** to synchronize weekly sprint deliverables.
- Delivered **5+ production projects** on Upwork, achieving a **100% client satisfaction rating** through consistent technical execution.

Quecko

Frontend Developer Intern

Islamabad, Pakistan

May 2025 – Aug 2025

- Debugged and resolved **20+ high-priority tickets** using systematic **troubleshooting** protocols during rapid development cycles.
- Maintained a **100% on-time delivery rate** for high-traffic platform features while meeting strict production deployment windows.

KEY PROJECTS

Cambfordable: Live EdTech Platform

Next.js, FastAPI, PostgreSQL, Zoom SDK, JWT

- Developed a live-streaming platform supporting **50+ concurrent participants** via **Zoom SDK** with zero session interruptions. cambfordable.com github.com/hamzabread/cambfordable
- Identified and resolved API integration bottlenecks between video layers using advanced debugging and technical collaboration.

Audio-Visual Manipulation Detection System

FastAPI, LangGraph, React, PyTorch, MTCNN

- Engineered a **FastAPI/React** multimodal framework achieving **66.7% accuracy** and **0.72 ROC-AUC** in cross-modal detection. github.com/abdullah/AV-Detection
- Architected a **LangGraph** orchestration system using **LLM tool-calling** to automate context-aware forensic reporting.

Peky E-commerce

Next.js, AWS Cognito, Tailwind, Railway, PostgreSQL

- Engineered a full-stack authentication system with **AWS Cognito**. Increased Performance and SEO by **30%** according to lighthouse report. pekypk.com github.com/hamzabread/Peky
- Optimized user conversion by **12%** through **Server-Side Rendering (SSR)** and atomic real-time inventory synchronization.

Smart Attendance System

FastAPI, React Native, Face Recognition AI, Docker

- Constructed a computer vision pipeline for GIKI achieving **92% identity detection accuracy** to automate record-keeping for **200+ students**. github.com/hamzabread/smart-attendance
- Reduced manual entry time by **80%** via a centralized **PostgreSQL** backend and automated reports.

TECHNICAL SKILLS

Programming Languages: C#, JavaScript (ES6+), Python, C++, SQL (Postgres)

Frameworks & Libraries: Express, Node, React, Next.js, FastAPI, Flask, LangGraph, LangChain, MERN

Tools & Methodologies: Agile development, ORM, Troubleshooting, Docker, Git, AWS, MQTT, Microservices

Core Competencies: Technical Leadership, System Architecture, Full-Stack Development, Data Persistence
