

Project Report: Real Estate Frontend + Backend

Date: 2026-06-05

Overview

This repository is a full-stack real-estate web application with a React frontend and a Node.js/Express backend. The project includes API routes, Mongoose models, controllers, and a Create-React-App based frontend with Tailwind and other UI components.

Technology Stack

Frontend:

- React (Create React App)
- Tailwind CSS
- Redux (state management), axios (HTTP client)

Backend:

- Node.js with Express
- MongoDB with Mongoose ODM
- Cloudinary for image hosting, SendGrid for email (env vars)

Repository Structure (high level)

Key folders:

- client/ — React frontend and a nested server at client/server/
- client/server/ — Express app, controllers, models, routes, config files
- client/src/ — React source components, pages, and assets

How to Run Locally

Prerequisites: Node.js, npm, MongoDB (or a MongoDB URI), and Homebrew for certain macOS native dependencies.

Suggested steps (two separate terminals):

1. Install frontend deps: `cd client && npm install`
2. Start backend: `cd client && node server/server.js` (ensure `MONGO_URI`, `CLOUDINARY_*`, and other env vars are set)
3. Start frontend: `cd client && npx react-scripts start`
