Quick Edit Checklist

1. Identify the text location
2. Open the correct file
3. Find the specific line
4. Make your changes
5. Test locally
6. Commit and push

How to Use Claude AI to Edit a Component

You can use Claude AI to quickly modify or improve a frontend component.

Claude AI link:

<https://claude.ai>

Steps

Open the component file you want to edit (for example, a .tsx component).

Select the entire component code.

Press Command + A to select all.

Press Command + C to copy the code.

Open Claude AI using the link above.

Paste the copied component code into Claude.

Clearly explain what you want to change (for example: update text, redesign layout, fix a bug, or improve styling).

Claude will generate an updated version of the component.

Copy the newly generated code from Claude.

Go back to your project and replace the previous component code with the new one.

Save the file and test the changes locally.
